Key Features: Online PDF version and searchable text Two-page illustrations for each bird, showing distribution, call, and behaviour Full text species accounts for all 125 species A list of recommended books and online resources Brief, descriptive species accounts Data on geographical range and biology Review of distinctive characteristics The latest discoveries and

research • This is a great way to get to know all of India's large birds, including colorful birds like egrets, kingfishers and blue owls. • It covers the red list species, so this is a great book to find out which birds are vulnerable. • It also describes the most common habitat types for each species. Price: \$ Author: Gee, Richard B. ISBN: 9780815601081 Search for: Click on the image above to download the Birds of the Indian Subcontinent. A Pictorial Guide to the Birds of the Indian Subcontinent. 275 Pages·1996·51 MB·1,115 Downloads[Study on the two-dimensional fluorescence spectra of polybrominated diphenyl ethers]. The gas chromatographic (GC) coupled with two-dimensional fluorescence spectroscopy (GC x GC-2D-F) was developed for the qualitative and quantitative analysis of polybrominated diphenyl ethers (PBDEs) in the atmosphere. In the work, two-dimensional fluorescence spectra of PBDEs (BDE-47, BDE-99, BDE-183, BDE-100, BDE-154 and BDE-209) were measured and the fluorescence intensity ratio of peak of BDE-99/BDE-47 and BDE-99/BDE-183 was taken as an indicator for determining the isomer ratio of the congeners, which were confirmed by GC-2D-F-TOFMS. The results of GC x GC-2D-F showed that the congeners in the atmospheric particles had various isomer ratio and congener number. The isomer ratio of BDE-99/BDE-47 in the atmospheric particles ranged from 7.04 to 15.53 and the isomer ratio of BDE-99/BDE-183 ranged from 13.94 to 22.91. The congener number of BDE-99, BDE-183, BDE-100, B 82157476af
